

CSA15- CLOUD COMPUTING AND BIG DATA ANALYTICS

1. Demonstrate virtualisation by Installing Type-2 Hypervisor in your device, create and configure VM image with a Host Operating system (Either Windows/Linux).

AIM;

To demonstrate virtualization by installing a Type-2 Hypervisor and creating and configuring a virtual machine with a Windows/Linux host operating system. This follows the VMware Workstation-based procedure shown in your reference photo. The experiment list specifies a Type-2 Hypervisor and VM configuration with Windows/Linux as the host OS

Procedure

1. Download and install **VMware Workstation** from the official VMware website.
2. Run the installer and complete the installation.
3. Launch **VMware Workstation**.
4. Click **Create a New Virtual Machine**.
5. Select **Typical (Recommended)** installation.
6. Select the required **Linux/Windows ISO image**.
7. Enter the virtual machine name and storage location.
8. Configure the required hardware settings such as CPU, memory, and storage.
9. Click **Finish** to create the virtual machine.
10. **Power on** the virtual machine.
11. Install the selected operating system by following the installation wizard.
12. Log in to the operating system to verify that the virtual machine has been successfully created and installed.

OUTPUT

Result

Thus, virtualization was successfully demonstrated using VMware Workstation as a Type-2 Hypervisor, and a virtual machine was created, configured, and successfully started with the selected operating system.
