

CSA15- CLOUD COMPUTING AND BIG DATA ANALYTICS

1. Create a Virtual Hard Disk and Allocate the Storage Using VMware Workstation

AIM;

To create a virtual hard disk and allocate storage to it using **VMware Workstation**. The experiment list specifically mentions creating a Virtual Hard Disk and allocating storage using VMware Workstation.

Procedure

1. Launch **VMware Workstation**.
2. Open the required **Virtual Machine**.
3. Select **Edit Virtual Machine Settings**.
4. Click **Add** to add a new virtual device.
5. Select **Hard Disk** and click **Next**.
6. Select the appropriate **Virtual Disk Type**.
7. Choose **Create a New Virtual Disk**.
8. Enter the required **disk capacity** for the virtual hard disk.
9. Select the location where the virtual disk file has to be stored.
10. Enter the virtual disk file name.
11. Click **Finish** to create the virtual hard disk.
12. Verify that the newly created virtual hard disk is listed in the VM hardware settings.
13. Power on the virtual machine and verify the allocated storage.

OUTPUT

Result

Thus, a virtual hard disk was successfully created and storage was allocated using VMware Workstation.
